TEST_LOG - AgriSoko Pocket G14

Generated: 2026-10-23 11:45:55 API: http://localhost:8000 Model version: 1.0.0-765cc783 Threshold: 0.45

Summary

Metric	Value
Member queries	18
Top-1 correct	14 / 18
Top-1 accuracy	77.8%
No-match queries	5
No-match correctly rejected	5 / 5
No-match rejection rate	100%

Member queries (3 per member)

#	Query	Category	Expected	Got	Confidence	Result
1	tell me about gad	name	gad	gad	0.737	OK
2	who is niyibigira gad	name	gad	gad	0.904	OK
3	who built the home screen	feature	gad	gad	0.625	OK
4	tell me about erssie	name	erssie	erssie	0.714	OK
5	who is teta erssie	name	erssie	erssie	0.932	OK
6	who built the tf-idf matcher	feature	erssie	NONE	0.0	MISS
7	tell me about sandrine	name	sandrine	sandrine	0.719	OK
8	who is mbabazi sandrine	name	sandrine	sandrine	0.94	OK
9	who built the index build	feature	sandrine	NONE	0.0	MISS
10	tell me about joel	name	joel	joel	0.745	OK
11	who is joel mogar	name	joel	joel	0.927	OK
12	who built the ask screen	feature	joel	joel	0.631	OK
13	tell me about claire	name	claire	claire	0.754	OK
14	who is marie claire	name	claire	claire	0.94	OK
15	who built the directory	feature	claire	NONE	0.0	MISS
16	tell me about bashir	name	bashir	bashir	0.714	OK

17	who is mohamed bashir	name	bashir	bashir	0.931	OK
18	who built the offline cache	feature	bashir	NONE	0.0	MISS

No-match queries (should all return null)

#	Query	Confidence	Result
1	who won the 1998 world cup	0.0	PASS
2	what is the capital of France	0.0	PASS
3	how do I cook rice	0.0	PASS
4	who is the president of Rwanda	0.0	PASS
5	tell me something interesting	0.0	PASS

Error analysis

The following queries returned the wrong member or no match:

- who built the tf-idf matcher
- who built the index build
- who built the directory
- who built the offline cache

Method

- TF-IDF vectorizer: word n-grams (1,2), sublinear TF, min_df=1
- Cosine similarity between query vector and each member document
- Alias boost: +0.40 if query contains exact full name or alias
- Stopwords stripped from query before vectorization (who, is, the, tell, me, about, built, etc.)
- Threshold: 0.45 (documented rationale: member docs are ~80 tokens; single-keyword queries with pure cosine score ~0.27-0.34, below threshold. Alias boost pushes exact-name queries to 0.7+. Feature queries rely on shared vocabulary with differentiated feature strings.)

Known limitations

- Word-based TF-IDF does not bridge synonyms ("leader" != "lead", "made" != "built").
- Feature queries perform best when they use exact terms from the member feature field.
- No semantic embeddings - this is by design (deterministic, offline, grounded).
